# Project approach

## 1.Planning our application

1. Create design template
2. Draw all views of the app (create a Wireframe):
3. Draw boxes around every component
4. Break Each View Into a Hierarchy of Components:

## 2.Code your application

1. Building a static application (mockup)
2. Determine What events happened for each component
3. Define which data each component need (define the store for each component)
4. Create a Redux store. Connect logger middleware (optional) and Redux Thunk middleware (alternatively, you can use Redux Saga, etc.).
5. Create for

## 3.Building the application

## 4.Improve the design!

## 5.Create test cases

## 6.Refactoring

# Component Hierarchy

- Apps.js
  - Footer.js
  - Header.js
  - Home.js
    - Home.js
    - QuestionCard.js
    - ResultCard.js
  - LeaderBoard.js
    - LeaderBoard.js
    - UserCard.js
  - Login.js
  - NewQuestion.js
